--	--------------------------------------

Alfred (Bernhard) Nobel, was born to Immanuel Nobel (an inventor and engineer) and Carolina Andriette (Ahlsell) Nobel on October 21, 1833 in Stockholm, Sweden. Dr. Nobel, a chemist, engineer, technocrat and entrepreneur of nineteenth century, invented dynamite and other powerful explosives bagging around 350 patents of different countries. He instituted awards in Chemistry, Physics, Physiology or Medicine, Peace and Literature. In 1969, Economics was also added to the list. These awards are popular as Nobel Prizes and each award is conferred every year to one or shared among not more than three living recipients for their contributions highly beneficial to humankind. This year ten men and two women are conferred with Nobel Prizes by Swedish Academy, Sweden. The core findings of scientific inquiry resulted in cancer therapy and climate with economic growth. The Noble prize for peace is shared by a medical doctor and a woman of 25 years. They promoted the need to put an end of molestation/gang rape in war crimes.
