**ABSTRACT**

Present investigation deals with bio assaying of synthesized Benzothiazolyl triazoles compounds namely 1-(4,6-dimethylbenzothiazolyl)-3,5-alkyl. The compounds were used to find out their plant regulatory activity in the confined environment of laboratory. Experiment was undertaken to investigate their effect on germination of seeds of two plants viz. of Green gram (*Phaseolus aureus* Roxb) and Soya bean (*Glycine max* Merrill).

**Graphical Abstract**

Heteryl 1,2,4-1H triazole.

**Keywords:** Benzothiazolyl triazoles, 1-(4,6-dimethylbenzothiazolyl)-3,5-alkyl/aryl, plant regulatory activity, seed germination.
